V0.1	2-25-2016	Requirement analysis rough draft created
V1.0	3-20-2016	Initial requirement analysis document completed

# Glossary

**Activity Feed** - Displays activity from your network, such as comments and profile changes.

**Company Page** - A page for companies to share information about their business and to make updates.

**Connection** - An indication that someone has accepted an invitation to connect, allowing the viewing of each other's profiles.

**Degrees** – How you are connected to others through people or groups.

**Follow** – A way to see updates in your news feed from people you are interested in.

**Group** - Allows users to come together and meet on a single page to communicate about a common subject.

**Headline** – Informative and concise information about your prospects.

**Inbox** - A place where messages can be sent, received, and viewed.

**Introduction** - A way for someone to bring two people who are not connected together.

**Invitation** - A notification to a user to join a network and form a new connection.

**Mention** - A tag that links a person or company in a post to their corresponding page.

**Message** - A private form of communication between two connected users.

**Network** - A group of users that one is connected to and can contact.

**Profile** - A page for users to share information about themselves, their job history, and experience.

**Recommendation** - A comment intended to commend someone, based on their experience, to viewers of their profile.

**Update** - Status changes and posts that appear on activity feeds.

# Project Summary

The project's name is LinkedOut and it is a career-based social network designed for the professional business community. The goal of this site is to have users establish connections with other users on a professional level. A user has the option to create a profile page where they can display their professional experience and achievement, such as education and employment history. A user can then connect to other users and share this information with them.

LinkedOut has many features, but one of its main features is a messaging tool that allows users who are connected to communicate with each other privately. The application as a whole can be used in such a way that a user can create a professional brand for themselves. By doing so, a user can pursue their career passion by browsing profiles and connecting with professionals in their field, turning professional relationships into opportunities.

# Functional & Non-Functional Requirements

## Functional requirements:

- Accounts Create:
  - Account Type
  - Profile Edit
- Job board:
  - Post jobs:
    - Job Descriptions/Requirements
  - Display:
    - Sort by Time/Type
    - Save Jobs
- Apply:

## Non-functional requirements:

- Security:
  - User Identification
- Notifications:
  - Email
- Search engine:
  - University Search
  - Interests Search
  - Location Search
- File Review Online:
  - Resume Review/Edit
  - Job Descriptions Review/Edit
- Comments:
  - Company
  - Person

# User & System Requirements

## User Requirements

- The software needs to limit what users can or cannot see based on their being logged in or not and/or linked with someone or not.
  - Use \$\_SESSION variables to track users' status across application usage.
  - Data - usernames, hashed passwords, links table ("friends").
- The software needs to provide registered users the ability to post resume-like work experience and education information.
  - Work experience table
  - Education table
- The software needs to allow user to search jobs.
  - The job information table
- The software needs to allow to use part of functionality without login

## System Requirements

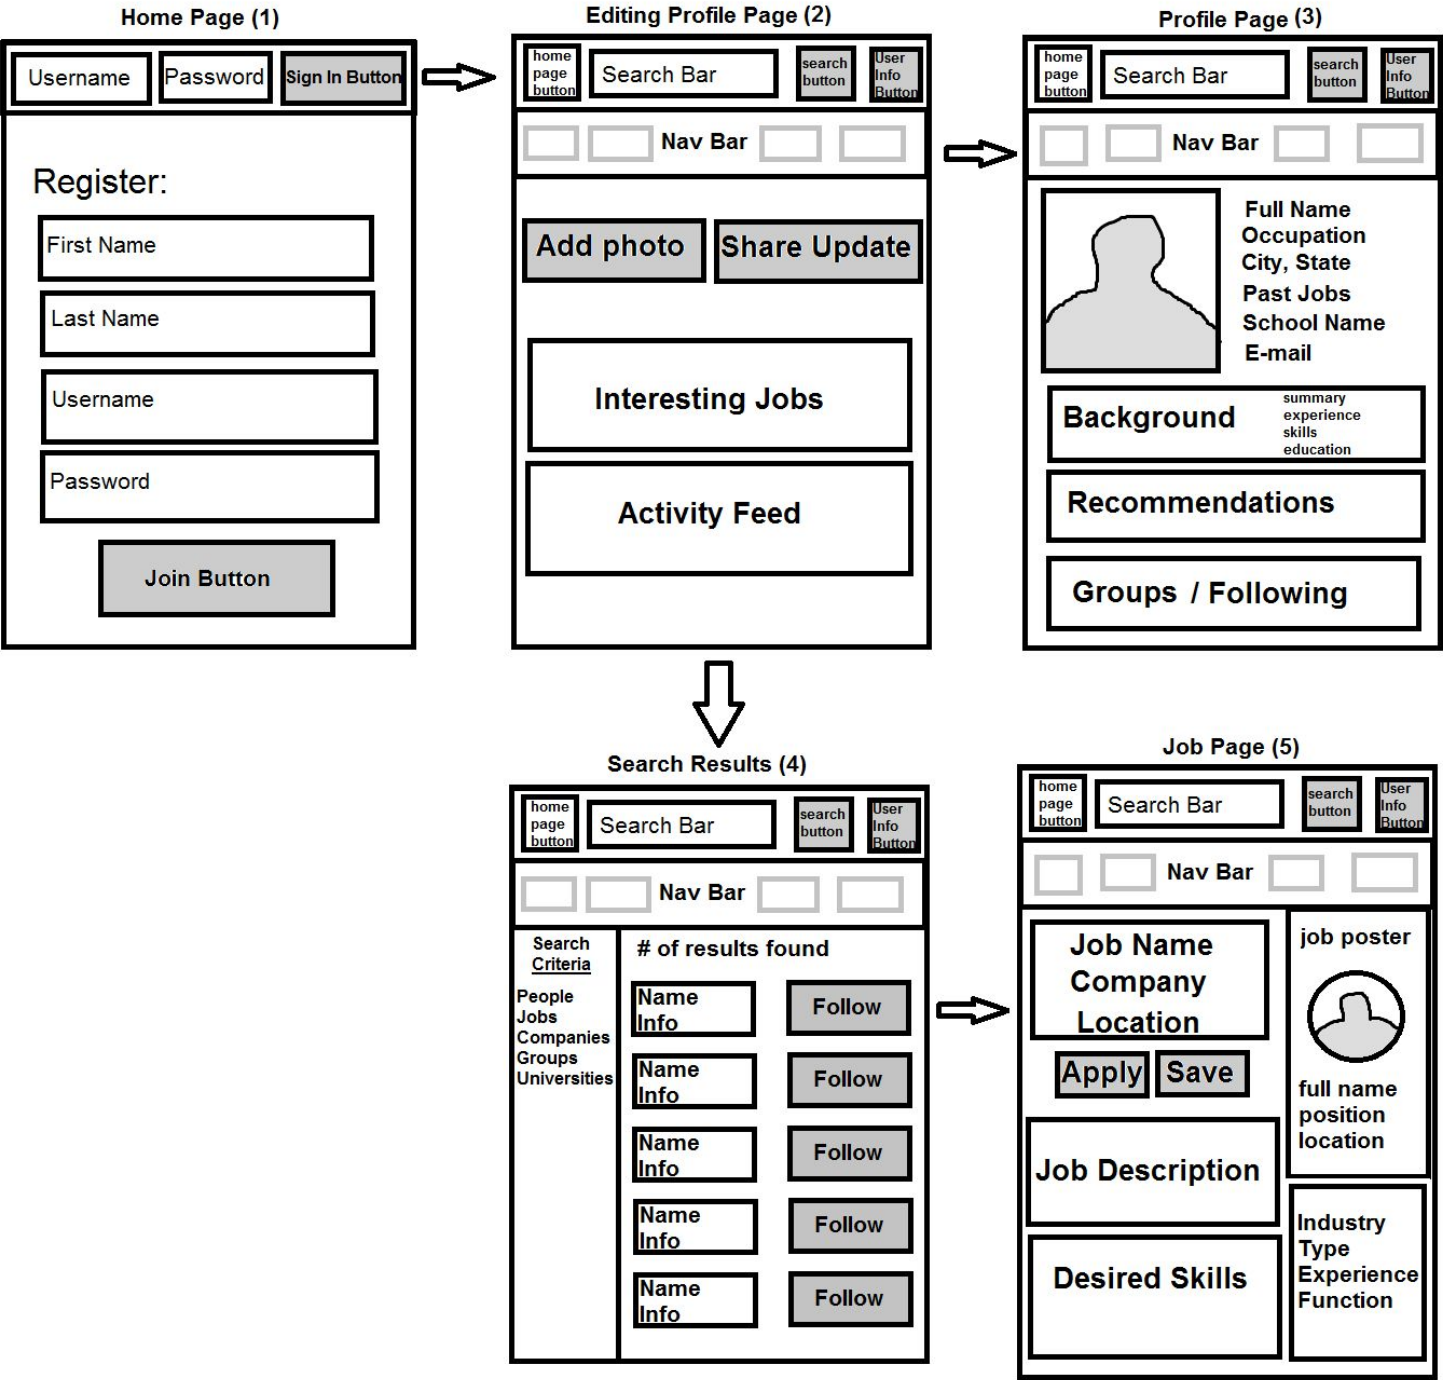

- MySQL Database
- Web server with PHP enabled
- Javascript Libraries - jQuery, D3.js
- HTML, CSS

# Use Case Diagram

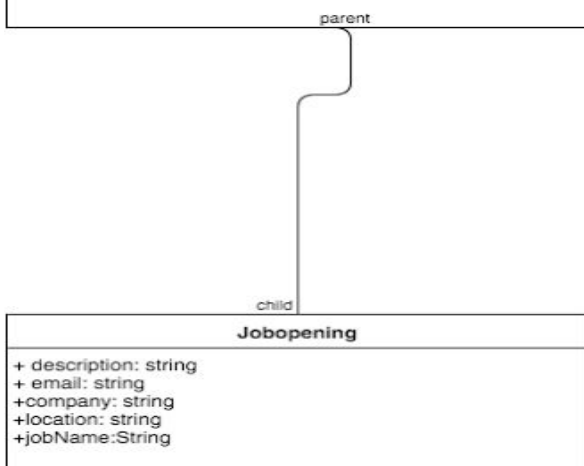

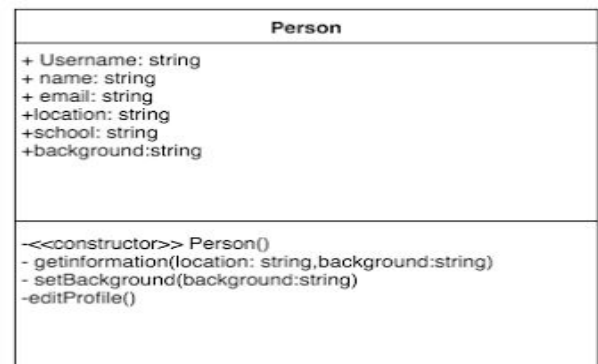

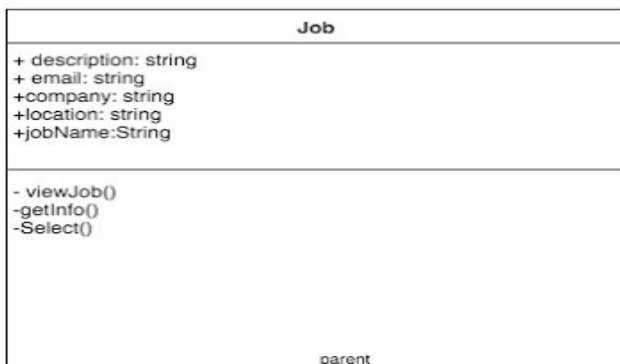

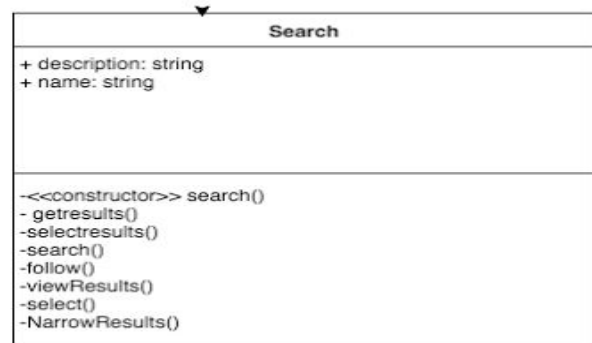

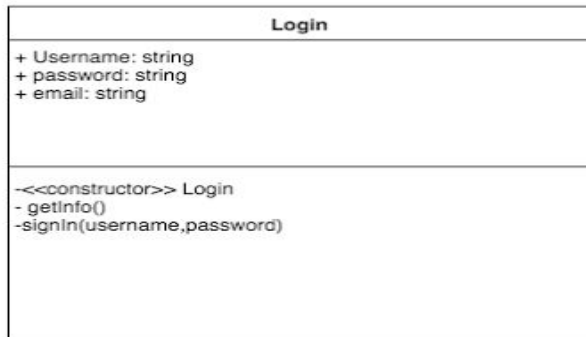

# Screen Sketches

# Software Component (UML Diagram)

# Table List (ERD)

Links table is a relation table for many to many relationship of users with other users.

Lookup can go both ways (i.e. if user 1 is linked to user 2, no need to link user 2 to user 1 as a separate entry in the table). User 1 is linked to everyone where user 1 is the username and where user 1 is the linked\_username.
